

FOOD FOR THE PLANET

A PUBLIC HEALTH TRAINING WORKSHOP

food
matters

sustainable, fair food systems

Half-day
workshop

In-person
or online

Prices
starting
from £990

Use food to help your local authority meet its climate and sustainability goals, whilst also improving public health

Food production is responsible for $\frac{1}{4}$ of global greenhouse gas emission

Food systems have a major impact on **climate change, biodiversity, natural resources** and **population health**. This workshop explores the important role **local authorities** can play in creating more **sustainable food systems** that benefit both people and the planet.

Drawing on the **latest evidence, policy developments** and **best-practice examples**, participants will examine how food can contribute to **climate action, nature recovery** and **healthier communities**.

Together, we explore what a food system approach to the climate and health challenges could look like at a local level.

90% of global deforestation is driven by **agricultural expansion**

IN THIS WORKSHOP

- Examine approaches to food policy, strategy, governance and partnership working.
- Use best-practice such as the Every Mouthful Counts Toolkit to assess local progress and identify opportunities for action
- Identify potential funding streams and support for local food system initiatives
- Explore where public health and environmental priorities overlap in your local authority

LEAVE WITH

- A clearer understanding of how food can support local climate and sustainability commitments.
- Practical ideas for embedding food into local environmental and sustainability strategies
- Ideas for strengthening links between public health, environmental and sustainability teams, based on best-practice examples
